# CI pipeline for Stereogram solver

QA Engineer – assignment

Design and implement an automated CI pipeline which ensures the quality of the web application Stereogram solver.

Requirements & conditions

- The solution is published in a public GIT repository.
- The CI pipeline runs after each commit into the repository.
- Meaningful tests are implemented.
- Application deployment is out of the scope of the assignment – use the already running instance on https://piellardj.github.io/stereogram-solver/.
- The solution including instructions how to test it is documented in a README.md file.

Optional extensions

- Visualize the test results in a test tracking software.
